Note

1. All parameters NOT specially mentioned at 230VAC input, rated load and 25 °C of ambient temperature.
2. Ripple&noise are measured from peak to peak with band width limit of 20MHz(0.1uF and 47uF/50V parallel capacitor under DC output full load,AC nominal input 25 °C ambient temperature).
3. Installation clearances: top with 40mm, bottom with 20mm, left and right with 5mm. Increase the space to 10-15mm when the adjacent device is heat source.
4. It could hold up 3 seconds max when reached peak power 1248W, and the average output power should not exceed the rate power.
5. Derating may be needed under low input voltage. Please check the derating curve for more details.
6. The ambient temperature derating of 3.5 °C /1000m for operating altitude higher than 2000m(6500ft).

Note

Current Sharing

1. Connection type of parallel operation is as follows (P+,P- parallel connection)
2. The output voltage difference between the parallel units should be less than 0.2V
3. The total output current must not exceed the value calculated of the following equation
(Output current at parallel operation)=(The rated current per unit)* (Number of unit) x 0.9
4. The maximum quantity of parallel operation is eight units, If need more quantity of parallel operation, please contact the manufacture.
5. In parallel connection, the minimum output load should be more than 3% of total output load
(Min. load > 3% rated current per unit x number of unit)
